## Age in Days

Adapted by Neilor Tonin, URI Brazil

**Timelimit: 1**

Read an integer value corresponding to a person's age (in days) and print it in years, months and days, followed by its respective message “ano(s)”, “mes(es)”, “dia(s)”.

Note: only to facilitate the calculation, consider the whole year with 365 days and 30 days every month. In the test cases never will have a situation that allows 12 months and some days, like 360, 363 or 364. This is just an exercise for the purpose of testing simple mathematical reasoning.

### Input

The input file contain 1 integer number.

### Output

Print the output like the following example.

| Sample Input | Sample Output                      |
|--------------|------------------------------------|
| 400          | 1 ano(s)<br>1 mes(es)<br>5 dia(s)  |
| 800          | 2 ano(s)<br>2 mes(es)<br>10 dia(s) |
| 30           | 0 ano(s)<br>1 mes(es)<br>0 dia(s)  |
